## NO. 11 JOIST BORING MACHINE

**SAVES BACK BREAKING EFFORT  
OPERATES FROM FLOOR—BORES HOLES  
AT ANY ANGLE!**

For Overhead Work

New and improved design.  
Bit positively locked in place  
by merely tightening knurled  
collar with fingers — no tool  
required.

For Floor Work

The Ideal Boring Machine is operated from the floor and bores holes at any angle through rafters, joists or studdings. It gets in and bores where no other tool could be used. Used on new or old floor and ceiling construction.

Light and easy to handle. The bit eats right into the wood with a light pull on the chain. Reversing the pull backs the bit out without bending or breaking.

### Save Time

It bores 5 times as fast as a brace or breast drill. The saved time is converted into bigger profits for you.

### Reduce Danger—Increase Safety

Eliminates climbing up and down on ladders. Quickly adjustable to any height from 7 feet to 11 feet for overhead work. Eliminate back-breaking stooping and straining on boring for floor work.

### Do Better Work

Bores at proper angle for all wiring. Right angle boring makes a neater, better job and consumes less wire.

### Special Quick Cutting Bits

Made special to our specifications. Solid point type. Special lip construction for fast and easy boring. Available in 10/16" and 11/16" diameters.

#### PRICE:

Complete, including 2 special bits (10/16" and 11/16" in diameter) .....\$19.30 net

Extra Bits (Quick Cutting) .....each .90 net

WEIGHT.....17 lbs.
